

Comparison of local predictions on the same analyzed frames (p2p; fixed reference-pose correspondences at $\xi=0$)

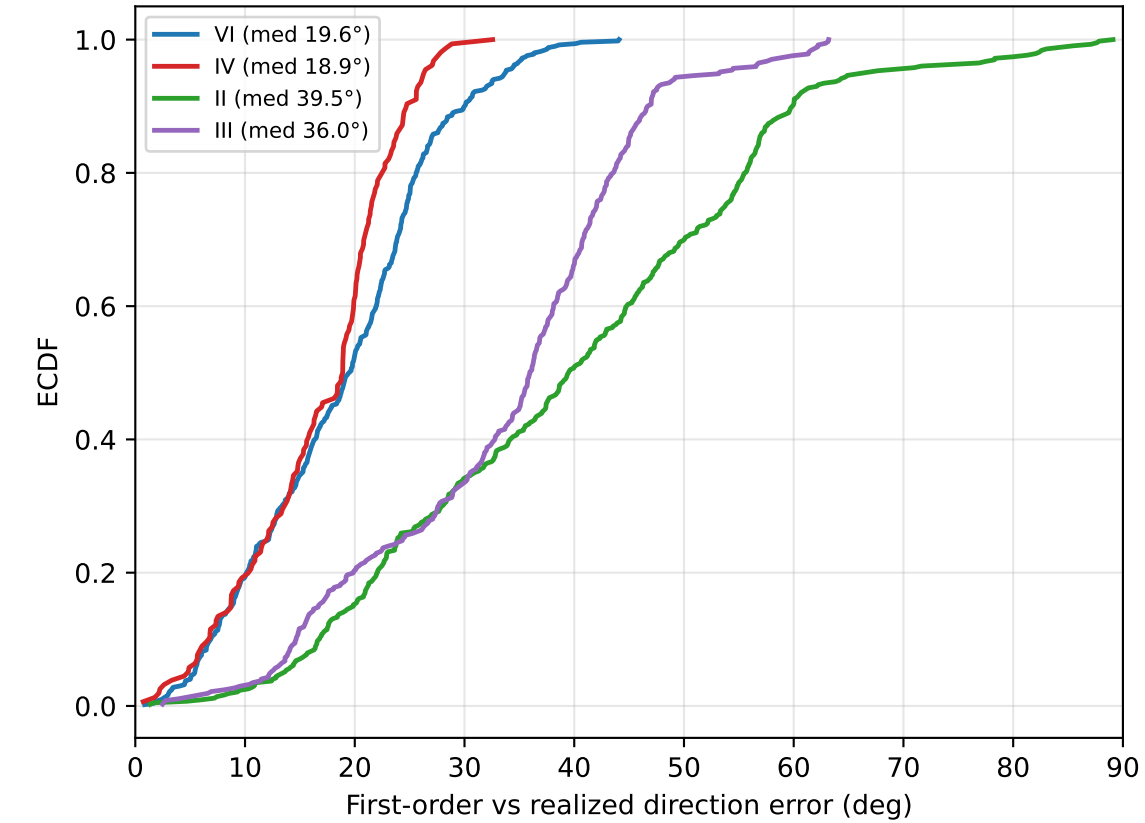

A. Residual RMS versus realized translation displacement

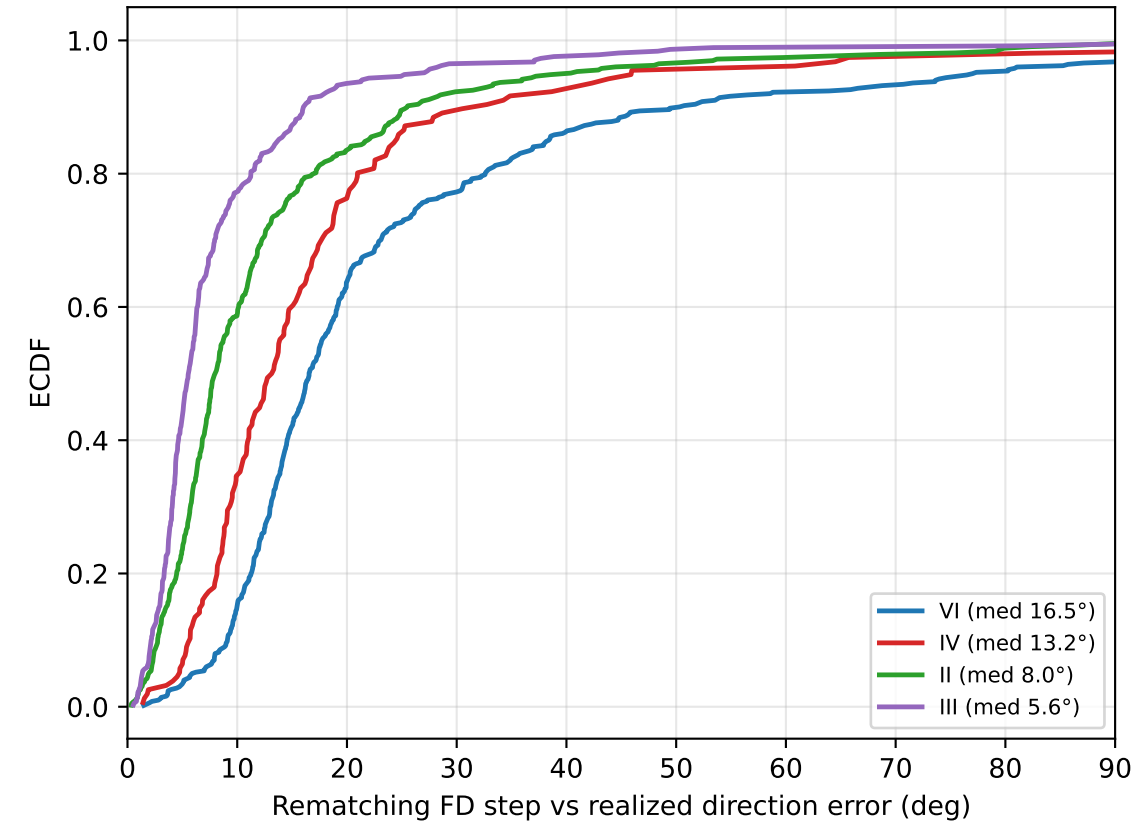

B. Pose-active residual RMS versus realized translation displacement

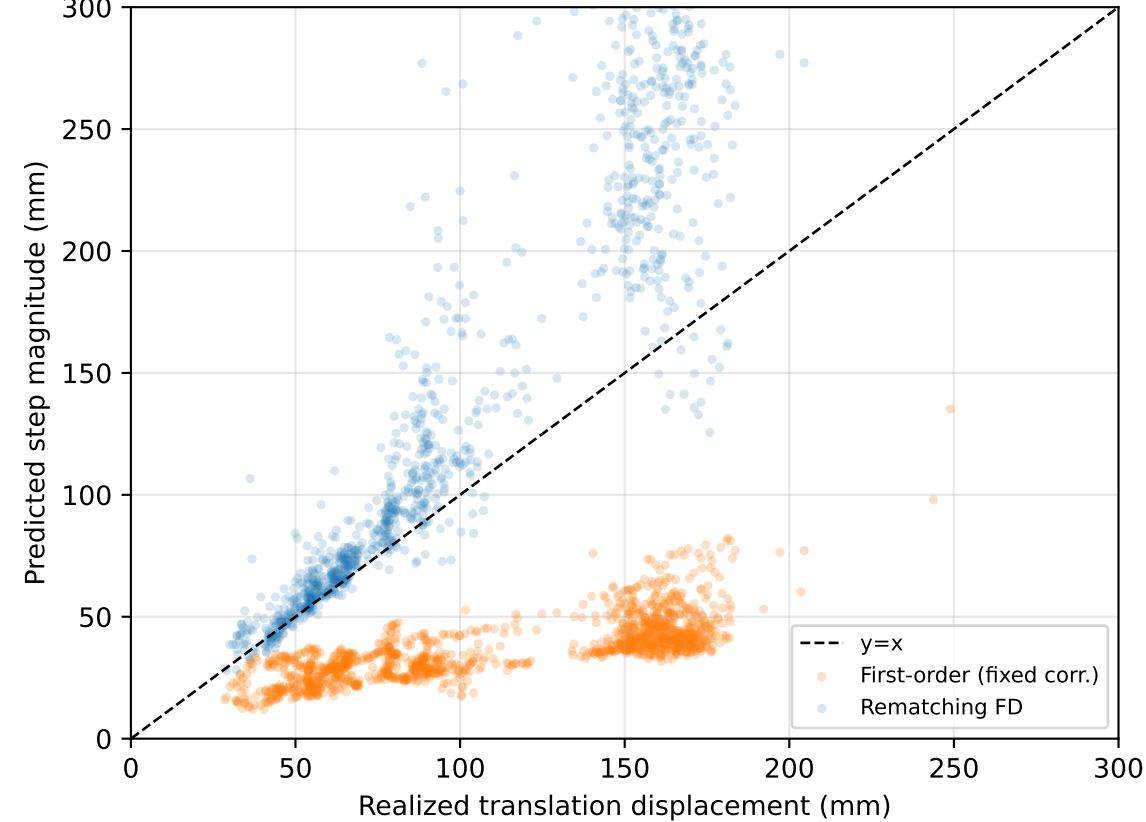

C. First-order direction with fixed correspondences

D. Rematching finite-difference direction

E. Predicted versus realized translation-step magnitude

F. Condition number / correspondence switching vs prediction error ($p_{\text{cond}}=+0.10$)
